**Cleaning Recommendations**

Cleaning process should follow standard institution procedures.

— **On/Off Valve and High Pressure Hose Assembly**
  Wipe externally with disinfectant on a soft cloth. **DO NOT autoclave, immerse in fluids, disassemble valve, use bleach, or sterilize.**

— **Small Bore Tubing Assembly**
  Single Patient Use. Replace tubing between patients and if in-line filter becomes occluded during use.
  *Always use retaining clamps when affixing tubing to fittings and/or connectors (see diagram in Panel D).*

— **Gauge**
  **DO NOT immerse gauge in any liquid.**
  **Gauge Case**
  Wipe exterior of the gauge case with bactericidal or virucidal wipe.
  **Gauge Crystal**
  **DO NOT** use alcohol or a solution containing phenols on crystal. Gently wipe crystal with bactericidal or virucidal wipe.

**Manual Jet Ventilators** are manually-controlled oxygen delivery systems used for transtracheal ventilation.

**High Pressure Hose Assembly**

- **Female DISS O₂ Fitting**
- **Regulator and Gauge** *(BE 183-SUR & BE 183-SUR-12 only)*
- **On/Off Valve**
- **Replace Small Bore Tubing Assembly** *(BE 183-2)* If in-line filter becomes visibly occluded.
- **Replacing a Small Bore Tubing Assembly**
  - Tubing must be positioned beyond second “bubble”.
- **Retaining Clamp** must be placed between first and second “bubbles”.
- **Luer Lock Catheter**
  - **Connection**
  - **Attachment**
  - **Small Bore Tubing Assembly w/ In-Line Filter (BE 183-2)**

**Directions for Use:**

1. Connect the DISS O₂ Fitting on the High Pressure Hose Assembly to a high pressure oxygen source.
   - **BE 183-SU & BE 183-SU-12** are designed to operate directly from a high pressure gas source that does not exceed 50 psi.
   - **BE 183-SUR & BE 183-SUR-12** (with gauge and regulator) are designed to allow adjustment of patient outlet pressure between 0-50 psi.
2. Place the **Luer Lock** end of the Small Bore Tubing in one hand and hold the **On/Off Valve** in the other.
3. Depress the plunger several times to ensure proper function of the device.
4. For the **BE 183-SUR & BE 183-SUR-12**, pull out the regulator knob and turn it until the gauge reads the desired pressure. Push the knob back in to “lock in” the pressure setting.
5. After the transtracheal catheter has been inserted and secured, connect it to the **Luer Lock** end of the Small Bore Tubing.
6. Depress the **On/Off Valve** plunger to initiate ventilation.
7. Ventilate the patient according to the department policy or as prescribed by the physician.
